Introduction >

RPG V4 has been trained to focus on **Medieval and Role Playing Game** characters attributes and elements, like heavy armor, leather armor, mage cloak and similar content. The model training uses **only original work** created with tools including Unreal Engine, custom editing, IMG2IMG painting and MidJourney. **Using an artist name** or style will still have an impact as Stable Diffusion AI still understands the meaning of these references, even if their work were not used in this model.

Sample | **Assassin**

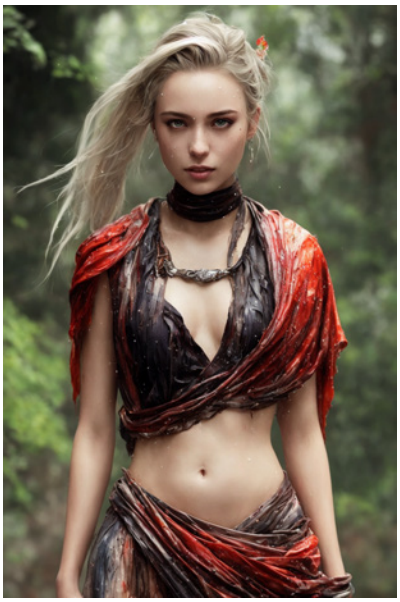
Style Range |

RPG V4 supports a vast range of shading styles and effects. Refer to the workflow section to help you finetune the exact style you wish to achieve for your creation. **Example of style** using variation on the core prompt structure.

Cloth Style |

RPG V4 has been trained on many clothing and fabrics details. The current version has a bias to floral-like patterns (flower, leaf and feather). **Example of fabrics** generated using RPG v4.

Cloak and delicate fabrics

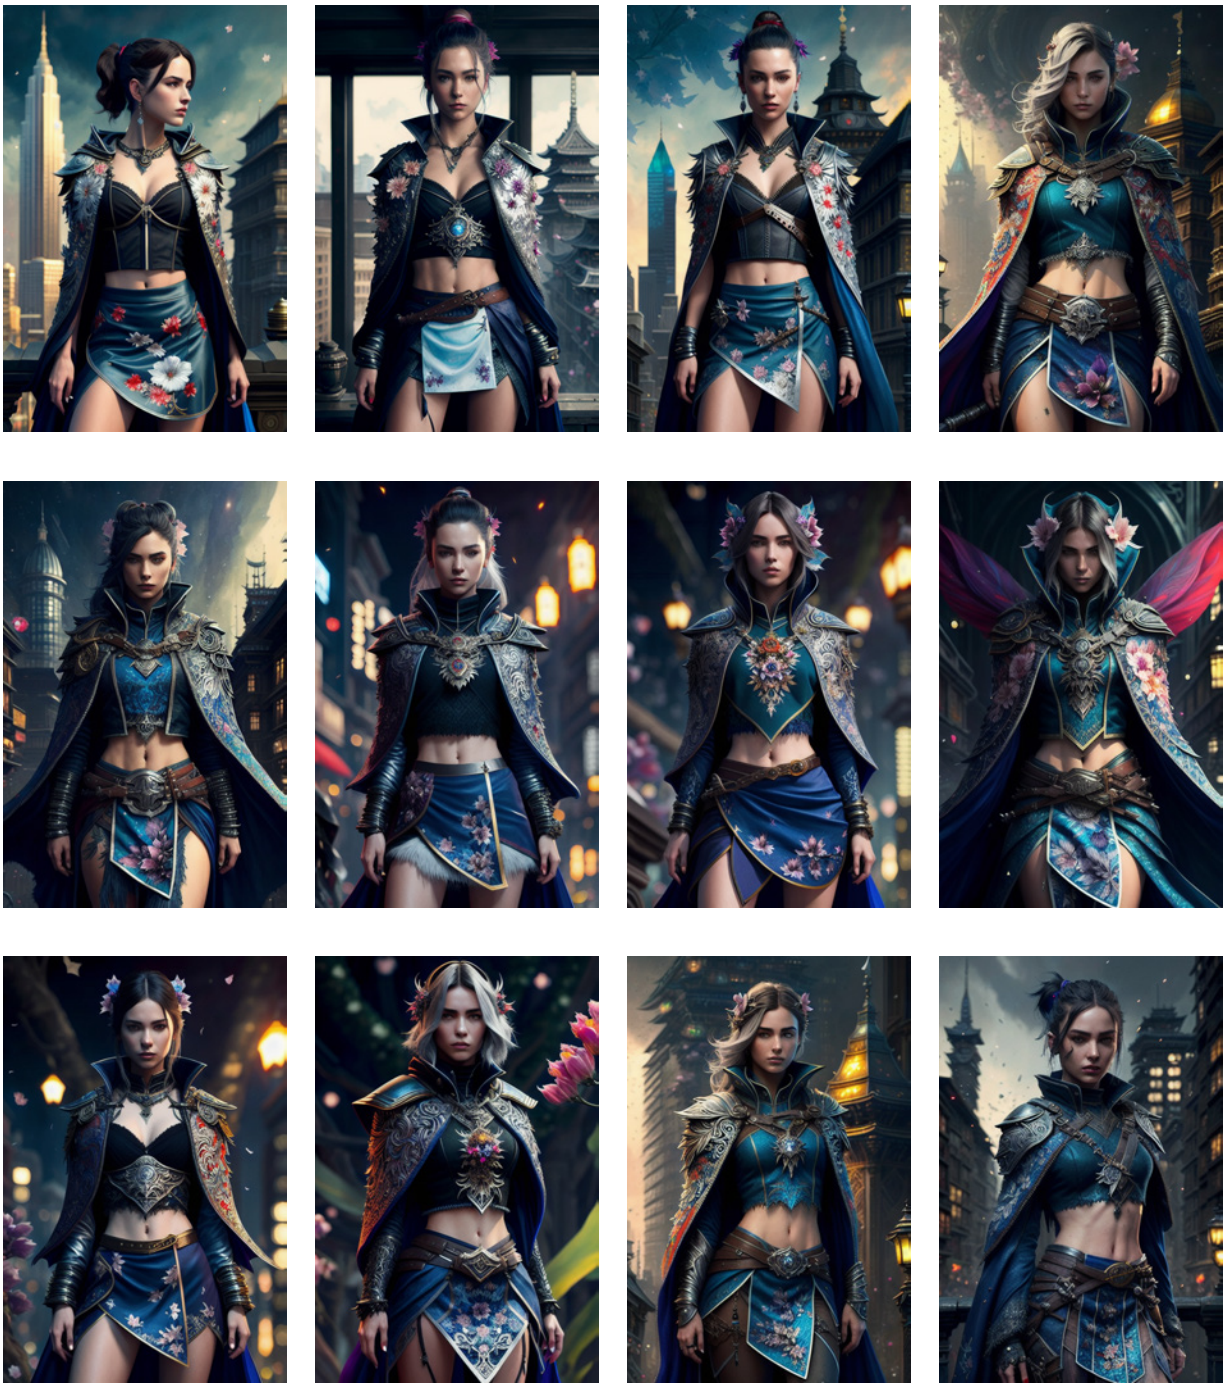


Leather and stitched

Heavy Armor and metal

Art Direction and Shader |

Installing the extension **StylePile** is a great way to help you experiment with shading and rendering style. Here is an example of **12 images** generated with “**Image Type”** and **“Direction”** set to random.



Training Concept |

RPG v4 does **not** use trigger words. You can use it for landscape as well as cloth, character and object. Hundreds of concepts and styles have been trained over four months using **exclusively original content**. Similar to the base Stable Diffusion model, prompt engineering and creative experimentation will let you get the most out of this model.

Negative Prompt |

This negative prompt has been optimized to help produce a higher rate of good images over multiple seeds. You can also **add optional negative prompts** to target specific aspects of the art you want to remove from. The model has a tendency to add flower patterns or facial marking. For example, (flower:1.2) will help you remove the chance of occurrence. If some armor style 'bleeds' you can add (metal:1.1) in negative when doing cloth or (cloak:1.1) for heavy armor. This also applies when doing a male character, you can add (women:1.2) in your negative prompt.

Exemple: **(flower:1.2), (Facial Marking:1.1)**, nude, (bad art, low detail, pencil drawing:1.4), (plain background, grainy, low quality, mutated hands and fingers:1.4), (watermark, thin lines:1.2), (deformed, signature:1.2), (blurry, ugly, bad anatomy, extra limbs, undersaturated, low resolution), disfigured, deformations, out of frame, amputee, bad proportions, extra limb, missing limbs, distortion, floating limbs, out of frame, poorly drawn face, poorly drawn hands, text, malformed, missing fingers, cropped

RPG v4 Workflow >

The following workflow was optimized to help produce high quality RPG style avatar. Here is an overview of the high level process you can use to create your artwork.

Flow 1 | Generate a Hi-Rez image

Select a Seed	**Create a grid**	**Select a style**	**Generate a Hi-Rez**
Generate 12 images with -1 as your seed. Cycle through the result and choose a see you like. Seed number is displayed under our image preview. Replace -1 with your seed for the next steps.	Set your batch to 1. Using the X/Y/Z plot in your script menu, choose STEPS and enter the value 30,50,75,105,150 for the X and select CFG Scale for the Y with the value 3,4.5,6.6,7	Using the StylePile in your script menu, set Image Type to Random and set Direction to Random. Generate a batch of 12 images. Look under the image preview to choose the best combination.	Set your batch to 1 and change your Image Type and Direction to the style you want. Click 'Hires Fix' and set the strength to 0.5 and upscale by 2 or 2.5 depending on your video card capacity.

Flow 2 | Polish with IMG2IMG

Select a Seed	**Create a grid**	**Select a style**	**Send to IMG2IMG**
Generate 12 images with -1 as your seed. Cycle through the result and choose a see you like. Seed number is displayed under our image preview. Replace -1 with your seed for the next steps. If you are new to the world of AI image generation, here are some resources to help you get the most out of it.

Automatic1111 |

https://github.com/AUTOMATIC1111/stable-diffusion-webui#installation-and-running

StylePile Extension |

https://github.com/some9000/StylePile#installation

Weight System |

Weight system lets you increase the intensity of a prompt, or reduce the importance of it by playing it in the negative prompt. (metal armor:1.1) will increase the emphasis of the metal armor. In general, use numbers between 1.1 and 1.3. To focus on cloth armor, you can put (silk cloth armor:1.2) in your prompt and add (metal:1.1) in your negative prompt.

Hi-Rez Art |

If your video card has the capacity, you can create stunning hi-resolution artwork with the Hi-Rez Fix using 4x-UltraSharp Upscaler and 0.4 denoising for an upscale of 2 to 3.
